### A-READING COMPREHENSION

#### Digital video cameras and webcams

Webcams (short for Web cameras) let you send and receive live video pictures through the Internet. They're primarily used for video conferences – video calls – but they can be used to record photos and video onto your hard disk.

The resolution of webcams is expressed in megapixels (million pixels). Webcams connect to the PC via a USB (universal serial bus) or FireWire port; they display video at 24 to 30 frames (pictures) per second. Some include a headset with a microphone and earpiece.
